

Do's and Dont's of using Generative AI

Generative AI is good at alot of things

- Generate original content for a blog or website
- Create inspiration for art pieces
- Create quick prototypes and mockups
- Perform grunt work like converting files or upscaling images

But it can be dangerous

- Don't take everything an AI says at face value, do your own research
- Don't use AI to plagiarize other artists

Things to be careful of

- Always check the terms and conditions of content generated by the AI, make sure you own the rights
- Make sure it doesn't infringe on the copyrights of other artists

AI is a great tool when used correctly

- With great power comes great responsibility. In order to keep generative AI open for the rest of us, don't abuse it
